

Introduction

Compass Engineering is a family owned structural steelwork fabrication company formed in 1985, specialising in the design, build and manufacture of all types of steel structures.

We operate from a modern 40,000 sq ft factory adjacent to junction 38 of the M1. Having built up a reputation for quality and competitiveness our aim is to continue our growth through investment in new plant and machinery whilst maintaining and developing our highly skilled and experienced workforce.

Direct links from drawing to CNC machinery reduces lead times and improves quality

5 storey office block structure for Norwich Union

Structures

We are thoroughly committed to our customers who command first class service in everything we do. Our hands on management and staff have the experience and qualities to provide this level of service. To help our people maintain our service and quality culture we have invested in the latest technology in design software, computer aided draughting systems and advanced computer controlled saw and drill line coupled to a flow line production process. This enables us to consistently produce high quality structural steelwork which can be based on our customer's consultant designs or alternatively we can utilize our own in house design & build technology.

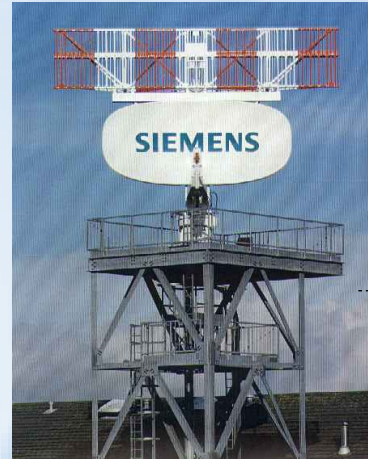

Structures cont.

The range of structure we produce is anywhere between 10 and 1000 tonnes. Projects vary from portal frames, medium rise beam and column, long span lattice and braced type structures. They cover a multitude of uses and include distribution, light industrial, complex leisure facilities, commercial premises, out of town retail and cinema projects.

Specialist Fabrications

We specialise in utilizing our work force's skills to the full. Our capabilities extend beyond the structural steelwork market into the supply of specialised and complex fabrications. We have a long history in fabricating radar towers, bulk handling gantries, silos, machine bases and storage bunkers. Our customers operate in industries as diverse as air traffic management, power distribution, information technology and material handling.
